

I have chosen to study at Computer Engineering because of several reasons but three stands out: My interest to technology, my personality, my curiosity of inventions.

First of all I had chosen to be a computer engineer because of my interest to the technology. Even when I was 6 years old I used to play some games on internet with my sister. Also I used to play a few games on our television and I often used to watch cartoons on our television because our television in our saloon has about 500 channels. Then, when I was 10 years old there were some games which is in my mother's mobile like Subway Surf, Temple Run and Fifa. Nowadays I again use technology everyday. I watch some videos on Youtube, I watch some series on Netflix, I play some mobile games, I use Instagram and Facebook. Besides I use the internet to do some research too. Shortly I love technology because I think it is both useful and entertaining.

Secondly my personality is convenient to be a computer engineering because I am not kind of hyperactive boy. I have been a calm person in each age of my personal life. Moreover I like to study at my desk and challenge with some hard work.

Finally I am keen on technological inventions because I consider that I am a science person and it makes me curious about events which happen with the help of science.

All in all I believe I will be one of the best people in computer engineering job. Besides I am sure that I will be happy when I be a computer engineer.
